

For the scenario below identify the **entities**, their **attributes** and appropriate **keys**

The Angel Warehouse

The Angel Warehouse stores items for its parent company. The warehouse is organised into **bays**, which are storage areas, but the **items** themselves are stored in **bins**. Each **bay** contains a **number of bins**. Each **bay** is identified by a **unique bay number** and the **bay location** and the **height of the bay are recorded**. Each **bin** has a different **number within the bay**, always starting with bin no. 1, and while some bays have only 5 bins some have over 50. The **size** of each bin is recorded.

Some bays have a parking spot for one fork lift to help move items round the warehouse and lift items into bins. Each **fork lift** is allocated to a **bay**. Each **fork lift** has a unique **equipment number** and the **maximum carrying weight** of the fork lift needs to be known. Some fork lifts are **petrol driven** while some are electric.

For all **bins** the **maximum loaded weight** must be known.

When an **item** is taken into the warehouse it is assigned a unique **number** and the **date** is recorded as well as the **item weight**. Bins can store a number of items and when an item is put in a particular bin this **date** is also recorded. Items can be moved back and forth between bays and bins to optimise the warehouse storage.
